TOOLING IN GLASS SHEET

TOOLING FOR THE FLOOR CATCH

Almost all handles can also be easily installed on a glass sheet.

Specially developed fixings are required to ensure that the whole process runs smoothly.

Glass is a material that requires an appropriate approach in terms of processing and installation, which is why it is not possible to install some handles on it. Such exceptions to our range are the K and KA series handles, as well as the PS series handles. The other handles can be installed on the glass without any problems.

The handles which are made of high-quality 316 stainless steel and mounted on glass doors are ideal for industrial or swimming pool areas with increased humidity, as well as in office spaces.

Handles on glass doors not only fulfil their practical function, but also elegantly blend in with the appearance of the surroundings.
